

# Orchestra

## Lighting, Air grills, Speakers, Integration System

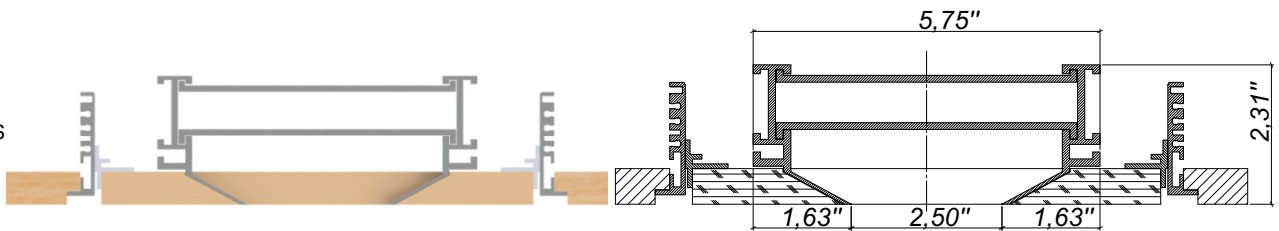

Orchestra is a System that integrates Lighting (recessed, pendants and ceiling mounted), Sprinklers, Air flow vents, speakers and devices that need to be installed on ceilings.

The system blends with the architecture, allowing the use of drywall, wood or the finished selected by the design team.

The minimum width is 7", up to 12". For bigger sizes please contact factory.

Coordination needed on elements used in each particular job. Runs are straight and can intersect at points generating a square with a reveal; there is always a reveal at both sides and a smaller reveal between caps. Pendant fixtures can also be hanging from the system.
